Кафедра инженерной психологии и эргономики

Отчет по лабораторной работе №3(3-4?) «Списки. Генераторы списков» Вариант 1

Выполнил: студент гр. 910101

Митенёв Г.Г.

Проверил: Кабариха В.А.

Задание:

Реализовать функцию-генератор для создания некоторой последовательности следующих данных:

1 простых чисел в диапазоне X-100X (например от 5 до 500)

Реализовать функцию:

1 нахождения второго минимального элемента в одномерном списке. В 10 списках, сгенерированных сл. образом найти самый минимальный из вторых, вывести все списки и найденный

Листинг кода задания № 1:

```
def prime_generator(start):
    for n in range(start, start*100):
        for x in range(2, n):
            if n % x == 0:
                break
        else:
            yield n

num=int(input("Enter the number you want to start with: "))
g = prime_generator(num)
print(list(g))
Результат работы:
```

```
Enter the number you want to start with: 3
[3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37, 41, 43, 47, 53, 59, 61, 67, 71, 73, 79, 83, 89, 97, 101, 103, 107, 109, 113, 127, 131, 137, 139, 149, 151, 157, 163, 167, 173, 179, 181, 191, 193, 197, 199, 211, 223, 227, 229, 233, 239, 241, 251, 257, 263, 269, 271, 277, 281, 283, 293]
Для продолжения нажмите любую клавишу . . .
```

Листинг кода задания № 2:

```
def second_smallest(numbers):
   if (len(numbers)<2):
     return
   if ((len(numbers)==2) and (numbers[0] == numbers[1])):
     return
   dup_items = set()</pre>
```

```
uniq_items = []
 for x in numbers:
  if x not in dup_items:
    uniq_items.append(x)
    dup\_items.add(x)
 uniq_items.sort()
 return uniq items[1]
from random import randint
1st1 = [randint(-100, 100) \text{ for i in } range(10)]
